Art Unit: 1617

Claims 1-5 are pending in this application which claims benefit of US Provisional application 60/419,271, filed October 17, 2002.

Applicant's claims are drawn to herbicidal compositions and methods comprising:

50 – 97%	betaine (herbicide)
1 – 15%	organic fertilizer
1 – 15%	organic adjuvants
1 – 48%	water (carrier).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It appears that the end of the second line of claim 4 should read: --...adjuvant which aids in the....-. The end of the claim is not understood: "...and organic pure yucca." It is unclear what is intended by the phrase "organic pure yucca". Yucca is necessarily "organic", being composed of carbon compounds; and plants are not normally described as being "pure", with the possible exception of tissue cultured plants. Finally, the grammatical connection with the preceding text of the claim is unclear.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1617

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miles et al (US 6,602,824).

Miles et al teach herbicidal compositions comprising betaine as a naturally occurring herbicidally useful component (col 3, line 31+) in an aqueous composition with the betaine concentration ranging from 15 to 47% (col 7, lines 12-18), further comprising additional adjuvant materials such as sucrose, raffinose, fructose, and other compatible components including fertilizer materials such as potassium, calcium oxide, and ash (lines 19-23), as well as 1-1-3 (NPK) fertilizer (col 8, lines 21-35). See also Table 1 (column 7). While the betaine concentration in Miles et al (15-47% by weight) is below that claimed herein (50-97 % by volume), one of ordinary skill in the art, recognizing the need to reduce transportation costs by reducing water content, would be motivated to increase the concentration of the active agent as much as possible. Hence, it would have been *prima facie* obvious to the ordinary artisan at the time the invention was made to have increase the concentration of betaine disclosed in Miles et al to produce a more concentrated, more cheaply transported composition comprising applicant's betaine, fertilizer, adjuvants, and water.

No unobvious or unexpected results are noted; no claim is allowed.
